

TP point d'accès Wifi

Introduction

On vas mettre en place un point d'accès wifi

1/Effectuer le reset du point d'accès

2/Trouver l'adresse IP pas défaut qui lui a été attribuée

Pour le Cisco WAP121, l'adresse IP par défaut dépend de ton réseau :

- Avec un serveur DHCP : le WAP121 reçoit automatiquement une adresse IP du DHCP. Ce n'est donc pas forcément `192.168.1.245` . Cisco +1
- Sans serveur DHCP : après environ **60 secondes**, il utilise l'adresse IP de secours `192.168.1.245` avec le masque `255.255.255.0` . Cisco +1

👉 Donc pour ton TP, si tu as fait le reset et qu'il n'y a pas de DHCP, essaie :

IP du WAP121 : `192.168.1.245`

Dans ton navigateur :

</> Texte brut

`http://192.168.1.245`

Et les identifiants usine sont généralement :

</> Texte brut

Utilisateur : `cisco`

Mot de passe : `cisco`

3/Afficher la page d'administration sur un navigateur Web

4/Configurer le point d'accès

Access Point Setup Wizard

Welcome	Welcome
Configuration	Thank you for choosing Cisco Systems, Inc. This setup wizard will help you install your Cisco Systems, Inc Access Point.
IP Address	To setup this access point manually you can cancel this wizard at any time (Not recommended).
Single Point Setup	
Time Settings	
Security	
Device Password	
Network Name	
Wireless Security	Note: This Setup Wizard provides simplified options to help you quickly get your access point up and running. If there is any option or capability that you do not see while running the setup wizard, click the learning link provided on many of the setup wizard pages. To set further options as you require or as seen in the learning link, cancel the setup wizard and go to the web-based configuration utility.
VLAN ID	
Summary	
Finish	Click Next to continue

Back Next Cancel

5/Documentation technicien

Pour accéder au site web embarqué du point d'accès wifi il faut aller dans les réglage moi elle ce trouve dans le doc mais trouvable dans la Spotlight

Puis on va dans réseau/ hub-usb

Puis on vas dans détail/ TCP IP puis dans le menu déroulant ou il y'a écrit DHCP il y'a la possibilité de mettre en manuelle = static

Ce qui donne ça car il faut ce mettre dans ça plage et puis être en " .246 " c'est une forme de sécurité pour voir si on c'est pas tromper

Puis on va sur un navigateur on tape " 192.168.1.245 " et on a ça

et on a ça le map c'est Cisco cisco

Ce qui nous donne ça

Single Point Setup -- Set A Cluster

A cluster provides a single point of administration and lets you view, deploy, configure, and secure the wireless network as a single entity, rather than as a series of separate wireless devices.

☐ Create a New Cluster
Recommended for a new deployment environment.
New Cluster Name:
AP Location:

☐ Join an Existing Cluster
Recommended for adding new wireless access points to the existing deployment environment.
Existing Cluster Name:
AP Location:

☒ Do not Enable Single Point Setup
Recommended for single device deployments or if you prefer to configure each device individually.

Click **Next** to continue

Back Next Cancel

Puis on fait next pour avoir cette image on localise en France

Summary
Finish

Enable Security - Set Password

The administrative password protects your access point from unauthorized access. For security reasons, you should change the access point password from its default settings. Please write this password down for future reference.

Enter a new device password:

New password needs at least 8 characters composed of lower and upper case letters as well as numbers/symbols by default.

New Password:

Confirm Password:

Password Strength Meter: Strong

Password Complexity: ☒ Enable

Finish

Enable Security - Secure Your Wireless Network

Select your network security strength.

☒ Best Security (WPA2 Personal - AES)
Recommended for new wireless computers and devices that support this option.
Older wireless devices might not support this option.

☐ Better Security (WPA Personal - TKIP/AES)
Recommended for older wireless computers and devices that might not support WPA2.

☐ No Security (Not recommended)

Enter a security key with 8-63 characters.

 Below Minimum

☒ Show Key as Clear Text

Next

Cancel

Puis on fait next jusqu'à finish ce qui fait que maintenant on peut se connecter à la wifi et avoir internet

À propos de moi

Développeur Informatique

Jeune passionné d'informatique, je suis à la recherche d'opportunités pour développer mes compétences et mettre en œuvre mes connaissances dans ce domaine en tant que développeur. Je suis intéressé par les technologies modernes et les défis techniques.

Pour les utilisateurs il faut aller dans le menu puis cliquer sur le symbol wifi ce qui vas nous donner un liste de wifi

Puis sa vas vous donner ça ou il faut mettre le mot de passe « btssiogap »

Et vous avez accès a internet

Conclusion

Voilà comment configurer cette borne wifi et si connecté
